

SUMMER FEEDS FOR LOCAL HERDS

**NEW ZEALAND'S
NO.1 MANUFACTURER
OF PELLETISED
STOCKFEED
GENUINELY CUSTOM
BLENDED TO MEET
INDIVIDUAL HERD
REQUIREMENTS**

Seales Summer Range of Premium Quality Dairy Pellets have been specifically formulated to strategically balance summer pasture conditions. As protein levels in pasture decline during summer, Seales have developed a range of products containing high protein levels, ensuring maximum productivity and improved body condition. Seales offer an ideal solution for supplementing your herd during summer to suit your individual needs.

CHOOSE THE FEED THAT SUITS YOUR HERD..

	Maxi-Pro Dairy Pellet	Summer-Pro Plus Dairy Pellet	Summer Special Dairy Pellet
Crude Protein (%)	20	16	13
MJ ME (kg)	12	11.7	11
NDF (%)	23	27	31
Starch (%)	17	20	15

*Approximates on a dry matter basis
**Custom blending of additives may alter final product specifications

- 🌀 Higher protein levels = more energy and improved productivity
- 🌀 Enables extended lactation = Increased profitability
- 🌀 Improved cow condition = Better calving and improved early season milk flow
- 🌀 Range of vitamins and minerals = Improved immunity, health and performance
- 🌀 Add Zinc and Rumensin® for optimal performance

INGREDIENTS SELECTED FROM..

Maize, Wheat, Barley, Broll, Palm Kernel, Soya Meal, Zeolite, Molasses, Salt, Lime Flour, Flavouring, DDGs, Canola, PPE, Vitamin Premix, Energiser Gold, Cotton Seed Meal, Seaweed Algafeed (*Leilinaire)

*Leilinaire Seaweed Algafeed is EXCLUSIVE TO SEALES and is extracted from pure natural seaweed. Leilinaire includes 12 identified vitamins, 13 identified minerals, 18 different amino acids as well as carbohydrates.

ADDITIVES CAN BE CUSTOM BLENDED TO YOUR PELLETS..

- 🌀 Rumensin®
- 🌀 ZinMet50®
- 🌀 Copper
- 🌀 Energizer Gold
- 🌀 Magnesium Oxide
- 🌀 Cobalt
- 🌀 LT4 (Trace Minerals)
- 🌀 Zinc
- 🌀 Selenium

*see overleaf for more detail

All information is presented in good faith using a globally accepted raw material matrix, however, variation in values and the outcome of feeding this product may occur. The blend of ingredients in this formulation may vary according to supply and demand.

NIRS:
(Near Infrared Spectrometer).
Seales test all finished products with a FOSS NIRS to ensure its products meet specification. This is recognised as the most accurate rapid analysis in the world.

ADDITIVE EXAMPLES

Seales Performance Stockfeed realise different herds have different requirements. Seales products are manufactured using state of the art technology giving Seales the ability to custom blend additives into your feed at a rate specific to your herd. This eliminates the risk of incorrect administration rates enabling you to minimise animal health issues and maximise performance.

Zinc	Zinc is a well known product used for the prevention of facial excema in livestock. Zinc can be included in your Seales feed at an inclusion rate based on animal weight and current feeding rate.
Rumensin®	Rumensin® works by improving the digestive efficiency of the rumen in converting feed into energy. The result is 7-15% more energy from pasture or supplementary feeds, and less gas produced. This extra energy is used by the cow to reduce energy-related diseases, improve cow condition and increase milk production. Rumensin® can also improve protein to fat ratios in milk and aids in the control of bloat. The recommended per cow dose rate for Rumensin® is 3 grams per head per day.
Energizer Gold	Energizer Gold provides a highly concentrated source of energy. Energizer Gold is a rumen protected bypass fat which means it provides a readily available source of energy which is not degraded in the rumen. As it is very palatable and easily digested Energizer Gold can be added to most supplementary feeds such as maize silage and PKE at up to 500 grams per head per day, or it can be custom blended into any quality Seales pellet at rates up to 5% of the ration. Energizer Gold is available exclusively from Seales Performance Stockfeed.
LT4 (Trace Minerals)	LT4 Dry is a balanced powder trace mineral package for dairy cows. Dairy cows require many minerals in their diet to maintain body systems and functions. LT4 provides a source of cobalt, copper, maganese and zinc which are able to boost the immune system, increase performance and improve production. The recommended feeding rate for LT4 is 16.6 grams per head per day and LT4 is available exclusively from Seales Performance Stockfeed.
ZinMet50®	ZinMet50® is a dry powder zinc methionine complex. Dry organic sources of zinc have been used with success in the dairy industry for many years. ZinMet50® has been proven to enhance the immune system, decrease somatic cell count, improve hoof health and improve production. The recommended feeding rate for ZinMet50® is 7.2 grams per head per day and is available exclusively from Seales Performance Stockfeed.
Magnesium Oxide	Magnesium Oxide is a magnesium supplement to aid in the prevention of hypomagnesia (magnesium deficiency) in cattle. Magnesium supplementation can assist in the prevention of milk fever and grass staggers and can help improve health and production. When adding to Seales pelletised feed it is recommended it be added at a rate to ensure each animal will receive 24-38 grams of Magnesium Oxide per day (depending upon animal requirements and based on 87% magnesium oxide product).
Leilinaire Seaweed Algafeed	EXCLUSIVE TO SEALES and is extracted from pure natural seaweed. Leilinaire includes 12 identified vitamins, 13 identified minerals, 18 different amino acids as well as carbohydrates.
Other	Copper, cobalt and selenium are other common products added to Seales feeds. These products are included at rates recommended by your vet or animal health expert.
